## **WREXHAM LAGER BREWERY INSTALL THE WORLD'S FIRST KEGBLOC KEGGING SYSTEM**

As part of a major investment which includes the installation of a complete new 50hl brew house supplied by Kasper Schulz, Wrexham Lager have installed a Moravek BC30 Kegbloc system for packaging their beers in 50 litre kegs.

This represents a world first where inline carbonation, inline sterile filtration, keg washing and keg filling have been installed on one fully integrated single platform.

This new approach to kegging offers a number of key benefits for breweries in terms of space saving, quick start up and automatic balance control of process and keg filling pressures.

The well proven Moravek BC gas atomise beer carbonation system provides a smooth consistent naturally carbonated finish for force carbonated beers and reduces dissolved oxygen DO content at the same time. The inline process also saves on preparation time and the need to have pressure rated tanks. The BC system can also be used for nitrogenation

Integrated sterile filtration filtration is built into the system with Parker Domnick Hunter 1 and 0.45 micron sterile filters.

These two process functions are mechanically and electronically synchronised with an m+f Kegtechnik Micromat 2/2b keg washing and keg filling machine from the Germany with a rated system output of 30 x 50L kegs per hour

For further information on how Moravek can improve and enhance the quality of your keg beers please contact [info@moravek.co.uk](mailto:info@moravek.co.uk) or call 01427 890098.
